Response to Amendment

Objection of the specification is no longer maintained in view of the amendment.

Objection of claim 86 is no longer maintained in view of the cancellation of claim 86.

Response to Arguments

Applicant's arguments filed August 28, 2003 have been fully considered but they are not persuasive. The rejection made in over Rubin et al. in view of Schmitt et al and Saunders Manual of Medical Practice under 35 U.S.C. §103(a) is maintained and is hereby repeated.

Applicant asserts that Rubin et al. does not teach sinusitis. Applicant admits that Rubin et al. teaches upper respiratory obstruction, but "the use of the surfactant is to enhance the distribution of inhaled anti-inflammatory agents...to the lower respiratory tract". In response to applicant's argument that Rubin et al. is nonanalogous art, it has been held that a prior art reference must either be in the field of applicant's endeavor or, if not, then be reasonably pertinent to the particular problem with which the applicant was concerned, in order to be relied upon as a basis for rejection of the claimed invention. See *In re Oetiker*, 977 F.2d 1443, 24 USPQ2d 1443 (Fed. Cir. 1992). In this case, Rubin et al. teach an anti-inflammatory agent that is inhaled for obstruction of the upper respiratory tract. If applicant's surfactant acts in a different way, it is not claimed. In response, "Products of identical chemical composition (i.e. menthol) can not have

mutually exclusive properties.” A chemical composition and its properties are inseparable. Therefore, if the prior art teaches the identical chemical structure, the properties applicant discloses and/or claims (i.e. distribution/spreading of an anti-inflammatory with a surfactant) are necessarily present. *In re Spada*, 911 F.2d 705, 709, 15 USPQ2d 1655, 1658 (Fed. Cir. 1990) (Applicant argued that the claimed composition was a pressure sensitive adhesive containing a tacky polymer while the product of the reference was hard and abrasion resistant. “The Board correctly found that the virtual identity of monomers and procedures sufficed to support a prima facie case of unpatentability of Spada’s polymer latexes for lack of novelty.”).

In response to applicant's arguments against the references individually, one cannot show nonobviousness by attacking references individually where the rejections are based on combinations of references. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA 1981); *In re Merck & Co.*, 800 F.2d 1091, 231 USPQ 375 (Fed. Cir. 1986).

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

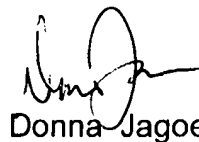

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the

shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
